Accreditation #108668 Testing Procedure: Obtain the required air sampling plates from our laboratory; keep refrigerated and inverted until use. Label the plates with the location description (i.e. kitchen) and record this on this form as the sample description. At time of sampling, place the plate upright in the desired room and remove the plastic lid exposing the agar to the open air. Leave the plate open for an hour to allow for air particles to settle on the plate. After 1 hour exposure, replace the lid and invert the plate. Return the air plates to the lab within 3 hours for analysis. After laboratory analysis, we will report the total number of bacteria, yeast or mold per hour.
